## NEW COMPRESSION SOLUTION FOR DATA STREAMING & MANAGEMENT

Super-CODEC Ai Driven Compression Technology Is a new artificial intelligence driven computer algorithm and compression software matrix completed and ready for full commercial launch.

This new patented compression technology and software will revolutionize data transit and compression between two and five times on current network systems and greater across future, 5G network platforms.

There is a ZERO data loss or corruption, upon compression and uses military grade encryption standard via proprietary encryption algorithm – which is 100% impenetrable to hackers or thieves.

Critical for high data traffic organizations, government, blockchain based exchange solution providers, central banks and treasury departments – stock and bond markets – data aggregate and high-volume data traffic aggregators such as search engines – data mining and cloud solution providers which need fast strong compression – this including audio and video streaming such as YouTube and others.

The major end user demographics mentioned will immediately benefit from this patented innovation by our group of companies and partner Associates.

Features include simple connectivity in and Interphase methodology which reduces the front-end cost as training not needed for any IT professional or educated IT staff.

This new compression software technology uses a proprietary algorithm and source code encryption technology and a new management methodology easy to use and Interphase with, while being absolutely impenetrable to inhospitable hackers or other nefarious bad actors in the data management space protecting great value consolidators. such as departments of treasury and central banks, block chain aggregation and exchange platforms, as well as any other organizations handling considerable value chains of considerable importance and value.

This is including stock and bond markets and related financial service/intake industry for operations, research and development companies, handling large data sets for analysis and others securely, safely, and most of all, at lightning speed!

For the first time in the modern age of artificial intelligence driven software compression solutions, Super-Codec AI Compression Technology has achieved currently, the greatest compression ratio and throughput speed to date, easily verifiable and/tested, through normal means and protocols for rendering 100% proof of functionality.

It's great value for all end users compels the company to contact the largest global end-users, who may benefit from this new technology, across the active data aggregation and management space.

The Company will be exercising a strong push towards complete commercialization and global rollout, of this new disruptive technology, during Q1-22.
